Amazon - Senior Technical Product Manager *Aug 2022 - Present*

Lead one-to-one-hundred product development of an internal HR tool for organizational design, driving enterprise wide adoption of the tool and growing the audience from 17 to over 5000 users.

- The product provided order of magnitude speed increases over previous org design tools and was described by internal VPs as having a "cult following."
- I successfully pitched and secured funding to move the product out of the prototype phase and staffed it for continued development.
- I worked with industrial and organizational psychologists, HR business partners, economists, research scientists, UX designers, and engineers

Tulip - Technical Product Manager *Aug 2021 - Aug 2022*

Responsible for Tulip's Edge offerings, connecting people, things, machines, and systems to Tulip's low code/no code platform. Products included our physical devices, firmware feature set, various runtime integrations with Tulip, the Tulip application "Player", and our cloud management portal.

- Lead the product launch of the Edge IO, our next generation, Linux based, single board computer edge device. The device won a head-to-head evaluation at a key customer, leading to a six-figure direct sale of devices (largest launch in company history), and preceded the team closing that customer to a \$13m, five year software contract along with a seven-figure strategic investment.
- Worked cross functionally with engineering, design, marketing, finance, sales, professional services, and customer support.
- Helped champion better Agile practices and Discovery practices across product teams.

Interrobang - Founder *Mar 2021 - Aug 2021*

Pursued an idea based on my experiences at Amazon to develop better tools to automate project management processes.

- Recruited UI and Technical co-founders.
- Testing showed we could automate project updates from individual contributors, but couldn't get project leads to properly structure projects.
- Decided the project made more sense as an internal tool for a consulting firm and decided to wind down operations.

Amazon - Senior Technical Program Manager *Feb 2020 - Mar 2021*

TPM for three back end software teams within the Alexa – Information organization: answer orchestration, visual answer composition, and a natural language answer provider service. *Feb 2019 - Mar 2021*

- Responsible for process development, Agile training, and implementing of planning and reporting structures to support the team senior manager as the team grew from 17 to 30+ people.
- Coordinated and drove alignment with dependencies on globally distributed teams.
- Coordinated deprecation of a manual override service with 184 internal customers including migration to multiple replacement services.

Amazon - Hardware Technical Program Manager *Sep 2018 - Feb 2020*

TPM for an entrepreneurial skunkworks group developing the next generation of hardware technology for Amazon Go cashierless stores. *Sep 2018 - Feb 2019*

- Coordinated activities across a team of 20+ including mechanical, electrical, firmware, optical, and industrial design disciplines.
- Distilled information from the technical leads and processed it into a cohesive whole to facilitate team planning.
- Built schedules, tracked and mitigated risks, and transitioned the team from open ended exploration to execution and product delivery.
- Served as a liaison to supply chain/operations, compliance, software, machine vision/AI, and reliability/test teams, and also formed and lead cross functional teams when necessary.

WrightGrid, LLC - Head of Product Development / Founder 2015 - 2018

Cofounder of a startup building cloud connected, solar powered cell phone charging kiosks. On \$400k of outside investment, we successfully deployed two dozen charging stations within Massachusetts and to various locations around the US. Shipped two dozen units to several countries in Africa, but failed to raise a Series A and wound down operations

- Hired and lead a small, cross disciplinary team of electrical, firmware, and cloud engineers. I doubled as the team's industrial designer and mechanical engineer.
- Responsible for vendor sourcing and management, BOM documentation, and unit installation. Responsible for the overall product development timeline.

AwkwardEngineer - Founder/Owner, 2010 - present

Solo venture, with end to end product development from concept through fulfillment, including independent product launches and Kickstarter campaigns. Distribution was through awkwardengineer.com and traditional retail channels. Today, it's mostly a blog.

Foliage, Inc - Mechanical Engineer 2012 - 2015

Project based consulting engagements in a client facing role. Responsibilities included proposal writing, requirements definition, schedule planning, design/engineering, build/integration, and knowledge transfer. Typically worked in small teams with electrical engineers and other disciplines to implement designs.

Education

B.S. Mechanical Engineering, WPI, '07, High Honors
